

# Nano Kit AFC/GTX

**Control unit for 10 tanks****Repowering for AFC and GTX systems**

Brings the fermentation temperature control system up to date!  
Fully assembled kit for 10 tanks. Simple, quick exchange.  
Unplug the old units, insert the kit and screw on the mounting plate - done!  
All other parts of the system remain unchanged.

The modern fermentation control for 10 tanks with a large actual and target temperature display. The iFerm Nano Kit can be operated with the iFerm Nano Terminal control unit operated centrally and significantly expanded in function.

**Technical specifications:**

- Display: target and actual temperature
- Accuracy: +/- 1.0 ° between 0 ° C and 40 ° C
- Resolution: +/- 0.1 °
- Measuring range: -9.9 ° ... + 99.9 ° C
- Controller types: PID
- Operating modes: cooling, heating
- Ambient temperature range: -10 .. + 40 ° C
- Switching outputs: 24V AC, 2A
- Protection: IP54

Note: Not suitable in connection with PC software FermAssist!
