

Nano Tank

Control Unit for 1 Tank

The latest single unit fermentation controller for one tank, with a clear display of actual and target temperature. The unit can be easily mounted into a thermowell on the tank because of the stainless steel sleeve on its back. The iFerm Nano Tank can be centrally operated with the iFerm Nano Terminal, which significantly increases functional options.

Technische Spezifikationen:

• Display:	Target and actual temperature
• Accuracy:	+/- 0.5°
• Resolution:	+/- 0.1°
• Range:	-9.9°...+99.9°C
• Controller system:	PID
• Operational modes:	Cooling, warming
• Rear side:	Sleeve: circa. 7 x 240mm
• Casing:	Plastic, PC (Polycarbonate) with GF
• Operating temperature:	-10 to +40°C
• Voltage:	24V AC +/- 10%
• Connecting cable:	6 Meters (braided wire)
• Dimensions:	WxHxD: 100x120x330 mm
• International protection code:	IP65

Recommendation:

- For easy and professional wiring, we recommend the iFerm Nano Box.
